# gov.au Observatory

This graph was created using website links from the DTA's Australian Government Web Crawl Dataset on data.gov.au. It shows domain-to-domain connections with more than 1250 links between them. Isolated domains (those without any links) have been removed.

Node size and colour reflect their importance and influence; larger and darker nodes are those that have more connections to others. Graph layout uses the Yifan Hu proportional algorithm and was generated using the Gephi software package
